

SYLLABUS

Integrated M.Sc. in Mathematics

Applicable from the Academic Year 2014–2015

NATIONAL INSTITUTE OF SCIENCE EDUCATION AND RESEARCH

BHUBANESWAR

Course Structure for Integrated M.Sc. in Mathematics

Semester	Course No.		Credits		Course Name
Semester I	M101	-	3	-	Mathematics-I
	M141	-	2	-	Computation Laboratory-I
	B101	-	3	-	Biology-I
	B141	-	2	-	Biology Laboratory-I
	C101	-	3	-	Chemistry-I
	C141	-	2	-	Chemistry Laboratory-I
	P101	-	3	-	Physics-I
	P141	-	2	-	Physics Laboratory-I
	H109	-	2	-	Technical Communication-I
	H125	-	2	-	Introduction to Psychology
Semester II	M102	-	3	-	Mathematics-II
	M142	-	2	-	Computation Laboratory-II
	B102	-	3	-	Biology-II
	B142	-	2	-	Biology Laboratory-II
	C102	-	3	-	Chemistry-II
	C142	-	2	-	Chemistry Laboratory-II
	P102	-	3	-	Physics-II
	P142	-	2	-	Physics Laboratory-II
	H110	-	2	-	Technical Communication -II
H133	-	2	-	Introduction to Sociology	
Semester III	M201	-	4	-	Real Analysis
	M202	-	4	-	Group Theory
	M203	-	4	-	Discrete Mathematics
	M207	-	4	-	Number Theory
	****	-	4	-	Elective-I
	****	-	4	-	Elective-II
Semester IV	M204	-	4	-	Metric Spaces
	M205	-	4	-	Linear Algebra
	M206	-	4	-	Probability Theory
	M208	-	4	-	Graph Theory
	****	-	4	-	Elective-III
	****	-	4	-	Elective-IV
Semester V	M306	-	4	-	Calculus of Several Variables
	M302	-	4	-	Rings and Modules
	M303	-	4	-	Differential Equations
	M304	-	4	-	Topology
	M305	-	4	-	Statistics
	****	-	4	-	Elective-V

Semester	Course No.		Credits		Course Name
Semester VI	M301	-	4	-	Lebesgue Integration
	M307	-	4	-	Field Theory
	M308	-	4	-	Complex Analysis
	M310	-	4	-	Geometry of Curves and Surfaces
	M311	-	4	-	Numerical Analysis
	****	-	4	-	Elective-VI
Semester VII	M401	-	4	-	Functional Analysis
	M403	-	4	-	Commutative Algebra
	M498	-	4	-	Project-I
	****	-	4	-	Elective-VII
	****	-	4	-	Elective-VIII
	****	-	4	-	Elective-IX
Semester VIII	M404	-	4	-	Algebraic Topology
	M402	-	4	-	Representations of Finite Groups
	M499	-	4	-	Project-II
	****	-	4	-	Elective-X
	****	-	4	-	Elective-XI
	****	-	4	-	Elective-XII
Semester IX	M598	-	20	-	Dissertation
	****	-	4	-	Elective-XIII
Semester X	M599	-	20	-	Dissertation
	****	-	4	-	Elective-XIV

Out of 56 credits as Electives, at least 8 credits from the School of Humanities and Social Sciences and at least 16 credits from other science schools must be taken.

List of Courses from School of Mathematical Sciences

Compulsory Courses

Course No.		Credits		Course Name
M101	-	3	-	Mathematics-I
M102	-	3	-	Mathematics-II
M141	-	2	-	Computation Laboratory-I
M142	-	2	-	Computation Laboratory-II
M201	-	4	-	Real Analysis
M202	-	4	-	Group Theory
M203	-	4	-	Discrete Mathematics
M207	-	4	-	Number Theory
M204	-	4	-	Metric Spaces
M205	-	4	-	Linear Algebra
M206	-	4	-	Probability Theory
M208	-	4	-	Graph Theory
M306	-	4	-	Calculus of Several Variables
M302	-	4	-	Rings and Modules
M303	-	4	-	Differential Equations
M304	-	4	-	Topology
M305	-	4	-	Statistics
M301	-	4	-	Lebesgue Integration
M307	-	4	-	Field Theory
M308	-	4	-	Complex Analysis
M310	-	4	-	Geometry of Curves and Surfaces
M311	-	4	-	Numerical Analysis
M401	-	4	-	Functional Analysis
M403	-	4	-	Commutative Algebra
M404	-	4	-	Algebraic Topology
M402	-	4	-	Representations of Finite Groups

Elective Courses

Course No.	Credits	Course Name
M451	- 4	- Advanced Complex Analysis
M452	- 4	- Advanced Functional Analysis
M453	- 4	- Advanced Linear Algebra
M454	- 4	- Partial Differential Equations
M455	- 4	- Introduction to Stochastic Processes
M456	- 4	- Algebraic Geometry
M457	- 4	- Algebraic Graph Theory
M458	- 4	- Algebraic Number Theory
M460	- 4	- Algorithm
M462	- 4	- Cryptology
M463	- 4	- Finite Fields
M464	- 4	- Information and Coding Theory
M465	- 4	- Mathematical Logic
M466	- 4	- Measure Theory
M467	- 4	- Nonlinear Analysis
M468	- 4	- Operator Theory
M469	- 4	- Theory of Computation
M470	- 4	- Abstract Harmonic Analysis
M471	- 4	- Advanced Number Theory
M472	- 4	- Advanced Probability
M473	- 4	- Algebraic Combinatorics
M474	- 4	- Foundations of Cryptography
M475	- 4	- Incidence Geometry
M476	- 4	- Lie Algebras
M477	- 4	- Optimization Theory
M478	- 4	- Advanced Partial Differential Equations
M479	- 4	- Random Graphs
M480	- 4	- Randomized Algorithms and Probabilistic Methods
M551	- 4	- Algebraic Computation
M552	- 4	- Analytic Number Theory
M553	- 4	- Classical Groups
M554	- 4	- Ergodic Theory
M555	- 4	- Harmonic Analysis
M556	- 4	- Lie Groups and Lie Algebras-I
M557	- 4	- Operator Algebras
M558	- 4	- Representations of Linear Lie Groups
M559	- 4	- Harmonic Analysis on Compact Groups
M560	- 4	- Modular Forms of One Variable
M561	- 4	- Elliptic Curves
M562	- 4	- Brownian Motion and Stochastic Calculus
M563	- 4	- Differentiable Manifolds and Lie Groups
M564	- 4	- Lie Groups and Lie Algebras-II
M565	- 4	- Mathematical Foundations for Finance

Syllabus of Compulsory Courses

M101: Mathematics-I

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
2	0	1	3

Method of Mathematical Proofs: Induction, Construction, Contradiction, Contrapositive. Set: Union and Intersection of sets, Distributive laws, De Morgan's Law, Finite and infinite sets. Relation: Equivalence relation and equivalence classes. Function: Injections, Surjections, Bijections, Composition of functions, Inverse function, Graph of a function. Countable and uncountable sets, Natural numbers via Peano arithmetic, Integers, Rational numbers, Real Numbers and Complex Numbers. Matrices, Determinant, Solving system of linear equations, Gauss elimination method, Linear mappings on \mathbb{R}^2 and \mathbb{R}^3 , Linear transformations and Matrices. Symmetry of Plane Figures: Translations, Rotations, Reflections, Glide-reflections, Rigid motions.

References:

2. K. B. Sinha et. al., "Understanding Mathematics", Universities Press (India), 2003.
3. M. Artin, "Algebra", Prentice-Hall of India, 2007 (Chapters 1, 4, 5).
4. J. R. Munkres, "Topology", Prentice-Hall of India, 2013 (Chapter 1).

M102: Mathematics-II

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
2	0	1	3

Concept of ordered field, Bounds of a set, ordered completeness axiom and characterization of \mathbb{R} as a complete ordered field. Archimedean property of real numbers. Modulus of real numbers, Intervals, Neighbourhood of a point. Sequences of Real Numbers: Definition and examples, Bounded sequences, Convergence of sequences, Uniqueness of limit, Algebra of limits, Monotone sequences and their convergence, Sandwich rule. Series: Definition and convergence, Telescopic series, Series with non-negative terms. Tests for convergence [without proof]: Cauchy condensation test, Comparison test, Ratio test, Root test, Absolute and conditional convergence, Alternating series and Leibnitz test. Limit of a function at a point, Sequential criterion for the limit of a function at a point. Algebra of limits, Sandwich theorem, Continuity at a point and on intervals, Algebra of continuous functions. Discontinuous functions, Types of discontinuity. Differentiability: Definition and examples, Geometric and physical interpretations, Algebra of differentiation, Chain rule, Darboux Theorem, Rolle's Theorem, Mean Value Theorems of Lagrange and Cauchy. Application of derivatives: Increasing and decreasing functions, Maxima and minima of functions. Higher order derivatives, Leibnitz rule, L'Hopital rule.

Text Book:

M201: Real Analysis

Prerequisites: M102

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Countability of a set, Countability of rational numbers, Uncountability of real numbers. Limit point of a set, Bolzano-Weirstrass theorem, Open sets, Closed sets, Dense sets. Subsequence, Limit superior and limit inferior of a sequence, Cauchy criterion for convergence of a sequence, Monotone subsequence. Tests of convergence of series, Abel's and Dirichlet's tests for series, Riemann rearrangement theorem. Continuous functions on closed and bounded intervals, Intermediate value theorem, Monotone functions, Continuous monotone functions and their invertibility, Discontinuity of monotone functions. Uniform continuity, Equivalence of continuity and uniform continuity on closed and bounded intervals, Lipschitz condition, Other sufficient condition for uniform continuity. Riemann Integration: Darboux's integral, Riemann sums and their properties, Algebra of Riemann integrable functions, Class of Riemann integrable functions, Mean value theorem, Fundamental theorems of calculus, Change of variable formula (statement only), Riemann-Stieltjes integration (definition). Taylor's theorem and Taylor's series, Elementary functions. Improper integral, Beta and Gamma functions.

Text Books:

- R. G. Bartle, D. R. Sherbert, "Introduction to Real Analysis", John Wiley & Sons, 1992.

2. K. A. Ross, “Elementary Analysis”, Undergraduate Texts in Mathematics, Springer, 2013.

References:

1. T. M. Apostol, “Calculus Vol. I”, Wiley-India edition, 2009.
2. S. K. Berberian, “A First Course in Real Analysis”, Undergraduate Texts in Mathematics, Springer-Verlag, 1994.

M202: Group Theory

L	P	T	C
3	0	1	4

Prerequisites: M101

Groups, subgroups, normal subgroups, quotient groups, homomorphisms, isomorphism theorems, automorphisms, permutation groups, group actions, Sylow’s theorem, direct products, finite abelian groups, semi-direct products, free groups.

Text Book:

1. D. S. Dummit, R. M. Foote, “Abstract Algebra”, Wiley-India edition, 2013.

References:

1. I. N. Herstein, “Topics in Algebra”, Wiley-India edition, 2013.
2. M. Artin, “Algebra”, Prentice-Hall of India, 2007.

M203: Discrete Mathematics

L	P	T	C
3	0	1	4

Prerequisites: M101

Pigeonhole principle, Counting principles, Binomial coefficients, Principles of inclusion and exclusion, recurrence relations, generating functions, Catalan numbers, Stirling numbers, Partition numbers, Schröder numbers, Block designs, Latin squares, Partially ordered sets, Lattices, Boolean algebra.

Text Books:

1. R. A. Brualdi, “Introductory Combinatorics”, Pearson Prentice Hall, 2010.
2. J. P. Tremblay, R. Manohar, “Discrete Mathematical Structures with Application to Computer Science”, Tata McGraw-Hill Edition, 2008.

References:

1. J. H. van Lint, R. M. Wilson, “A Course in Combinatorics”, Cambridge University Press, 2001.
2. I. Anderson, “A First Course in Discrete Mathematics”, Springer Undergraduate Mathematics Series, 2001.
3. R. P. Stanley, “Enumerative Combinatorics Vol. 1”, Cambridge Studies in Advanced Mathematics, 49, Cambridge University Press, 2012.

M204: Metric Spaces

L	P	T	C
3	0	1	4

Prerequisites: M201

Metric spaces, open balls and open sets, limit and cluster points, closed sets, dense sets, complete metric spaces, completion of a metric space, Continuity, uniform continuity, Banach contraction principle, Compactness, Connectedness, pathconnected sets. Sequences of functions, Pointwise convergence and uniform convergence, Arzela-Ascoli Theorem, Weierstrass Approximation Theorem, power series, radius of convergence, uniform convergence and Riemann integration, uniform convergence and differentiation, Stone-Weierstrass theorem for compact metric spaces.

Text Books:

1. G. F. Simmons, "Introduction to Topology and Modern Analysis", Tata McGraw-Hill, 2013.
2. S. Kumaresan, "Topology of Metric Spaces", Narosa Publishing House, 2005.

References:

1. R. R. Goldberg, "Methods of Real Analysis", John Wiley & Sons, 1976.
2. G. B. Folland, "Real Analysis", Wiley-Interscience Publication, John Wiley & Sons, 1999.

M205: Linear Algebra

$L \quad P \quad T \quad | \quad C$

Prerequisites: M101

3	0	1	4
---	---	---	---

System of Linear Equations, Matrices and elementary row operations, Row-reduced echelon form of matrices, Vector spaces, subspaces, quotient spaces, bases and dimension, direct sums, Linear transformations and their matrix representations, Dual vector spaces, transpose of a linear transformation, Polynomial rings (over a field), Determinants and their properties, Eigenvalues and eigenvectors, Characteristic polynomial and minimal polynomial, Triangulation and Diagonalization, Simultaneous Triangulation and diagonalization, Direct-sum decompositions, Primary decomposition theorem.

Text Book:

1. K. Hoffman, R. Kunze, "Linear Algebra", Prentice-Hall of India, 2012.

References:

1. S. H. Friedberg, A. J. Insel, L. E. Spence, "Linear Algebra", Prentice Hall, 1997.
2. A. Ramachandra Rao, P. Bhimasankaram, "Linear Algebra", Texts and Readings in Mathematics, 19. Hindustan Book Agency, New Delhi, 2000.
3. M. Artin, "Algebra", Prentice-Hall of India, 2007.

M206: Probability Theory

$L \quad P \quad T \quad | \quad C$

Prerequisites: M102

3	0	1	4
---	---	---	---

Combinatorial probability and urn models; Conditional probability and independence; Random variables – discrete and continuous; Expectations, variance and moments of random variables; Transformations of univariate random variables; Jointly distributed random variables; Conditional expectation; Generating functions; Limit theorems; Simple symmetric random walk.

Text Books:

1. S. Ross, "A First Course in Probability", Pearson Education, 2012.
2. D. Stirzaker, "Elementary Probability", Cambridge University Press, Cambridge, 2003.

References:

1. K. L. Chung, F. AitSahlia, "Elementary Probability Theory", Undergraduate Texts in Mathematics. Springer-Verlag, 2003.
2. P. G. Hoel, S. C. Port, C. J. Stone, "Introduction to Probability Theory", The Houghton Mifflin Series in Statistics. Houghton Mifflin Co., 1971.
3. W. Feller, "An Introduction to Probability Theory and its Applications Vol. 1 and Vol. 2", John Wiley & Sons, 1968, 1971.

M207: Number Theory

$L \quad P \quad T \quad | \quad C$

Prerequisites: M101

3	0	1	4
---	---	---	---

Divisibility, Primes, Fundamental theorem of arithmetic, Congruences, Chinese remainder theorem, Linear congruences, Congruences with prime-power

modulus, Fermat's little theorem, Wilson's theorem, Euler function and its applications, Group of units, primitive roots, Quadratic residues, Jacobi symbol, Binary quadratic form, Arithmetic functions, Möbius Inversion formula, Dirichlet product, Sum of squares, Continued fractions and rational approximations.

Text Book:

1. I. Niven, H. S. Zuckerman, H. L. Montgomery, "An Introduction to the Theory of Numbers", Wiley-India Edition, 2008.

References:

1. T. M. Apostol, "Introduction to Analytic Number Theory", Springer International Student Edition, 2000.
2. G. A. Jones, J. M. Jones, "Elementary Number Theory", Springer Undergraduate Mathematics Series. Springer-Verlag, 1998.

M208: Graph Theory

L	P	T	C
3	0	1	4

Prerequisites: M101

Graphs, subgraphs, graph isomorphisms, degree sequence, paths, cycles, trees, bipartite graphs, Hamilton cycles, Euler tours, directed graphs, matching, Tutte's theorem, connectivity, Menger's theorem, planar graphs, Kuratowski's theorem, vertex and edge colouring of graphs, network flows, max-flow min-cut theorem, Ramsey theory for graphs, matrices associated with graphs.

Text Book:

1. R. Diestel, "Graph Theory", Graduate Texts in Mathematics, 173. Springer, 2010.

References:

1. B. Bollobás, "Modern Graph Theory", Graduate Texts in Mathematics, 184. Springer-Verlag, 1998.
2. F. Harary, "Graph Theory", Addison-Wesley Publishing Co., 1969.
3. J. A. Bondy, U. S. R. Murty, "Graph Theory", Graduate Texts in Mathematics, 244. Springer, 2008.

M301: Lebesgue Integration

L	P	T	C
3	0	1	4

Prerequisites: M201

Outer measure, measurable sets, Lebesgue measure, measurable functions, Lebesgue integral, Basic properties of Lebesgue integral, convergence in measure, differentiation and Lebesgue measure. L_p Spaces, Holder and Minkowski inequalities, Riesz-Fisher theorem, Radon-Nykodin theorem, Riesz representation theorem. Fourier series, L_2 -convergence properties of Fourier series, Fourier transform and its properties.

Text Books:

1. H. L. Royden, "Real Analysis", Prentice-Hall of India, 2012.
2. G. B. Folland, "Real Analysis", Wiley-Interscience Publication, John Wiley & Sons, 1999.

References:

1. G. de Barra, "Measure Theory and Integration", New Age International, New Delhi, 2003.
2. W. Rudin, "Principles of Mathematical Analysis", Tata McGraw-Hill, 2013.

M302: Rings and Modules

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M202, M205

Rings, ideals, quotient rings, ring homomorphisms, isomorphism theorems, prime ideals, maximal ideals, Chinese remainder theorem, Field of fractions, Euclidean Domains, Principal Ideal Domains, Unique Factorization Domains, Polynomial rings, Gauss lemma, irreducibility criteria.

Modules, submodules, quotients modules, module homomorphisms, isomorphism theorems, generators, direct product and direct sum of modules, free modules, finitely generated modules over a PID, Structure theorem for finitely generated abelian groups, Rational form and Jordan form of a matrix, Tensor product of modules.

Text Book:

1. D. S. Dummit, R. M. Foote, “Abstract Algebra”, Wiley-India edition, 2013.

References:

1. I. N. Herstein, “Topics in Algebra”, Wiley-India edition, 2013.
2. M. Artin, “Algebra”, Prentice-Hall of India, 2007.

M303: Differential Equations

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M201, M205

Classifications of Differential Equations: origin and applications, family of curves, isoclines. First order equations: separation of variable, exact equation, integrating factor, Bernoulli equation, separable equation, homogeneous equations, orthogonal trajectories, Picard’s existence and uniqueness theorems. Second order equations: variation of parameter, annihilator methods. Series solution: power series solutions about regular and singular points. Method of Frobenius, Bessel’s equation and Legendre equations. Wronskian determinant, Phase portrait analysis for 2nd order system, comparison and maximum principles for 2nd order equations. Linear system: general properties, fundamental matrix solution, constant coefficient system, asymptotic behavior, exact and adjoint equation, oscillatory equations, Green’s function. Sturm-Liouville theory. Partial Differential Equations: Classifications of PDE, method of separation of variables, characteristic method.

Text Books:

1. S. L. Ross, “Differential Equations”, Wiley-India Edition, 2009.
2. E. A. Coddington, “An Introduction to Ordinary Differential Equations”, Prentice-Hall of India, 2012.

References:

1. G. F. Simmons, S. G. Krantz, “Differential Equations”, Tata Mcgraw-Hill Edition, 2007.
2. B. Rai, D. P. Choudhury, “A Course in Ordinary Differential Equation”, Narosa Publishing House, New Delhi, 2002.
3. R. P. Agarwal, D. O’Regan, “Ordinary and Partial Differential Equations”, Universitext. Springer, 2009.

M304: Topology

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M204

Topological Spaces, Open and closed sets, Interior, Closure and Boundary of sets, Basis for Topology, Product Topology, Subspace Topology, Metric Topology, Compact Spaces, Locally compact spaces, Continuous functions, Open map, Homeomorphisms, Function Spaces, Separation Axioms: T1, Hausdorff, regular, normal spaces; Uryshon's lemma, Tietze Extension Theorem, One point compactification, Connected Spaces, Path Connected Spaces, Quotient Topology, Homotopic Maps, Deformation Retract, Contractible Spaces, Fundamental Group, The Brouwer fixed-point theorem.

Text Books:

1. J. R. Munkres, "Topology", Prentice-Hall of India, 2013.
2. M. A. Armstrong, "Basic Topology", Undergraduate Texts in Mathematics, Springer-Verlag, 1983.

References:

1. J. L. Kelley, "General Topology", Graduate Texts in Mathematics, No. 27. Springer-Verlag, New York-Berlin, 1975.
2. K. Jänich, "Topology", Undergraduate Texts in Mathematics. Springer-Verlag, 1984.

M305: Statistics

Prerequisites: M206

L	P	T	C
3	0	1	4

Descriptive Statistics, Graphical representation of data, Curve fittings, Simple correlation and regression, Multiple and partial correlations and regressions, Sampling, Sampling distributions, Standard error. Normal distribution and its properties, The distribution of \bar{X} and S^2 in sampling from a normal distribution, Exact sampling distributions: χ^2 , t , F . Theory and Methods of Estimation: Point estimation, Criteria for a good estimator, Properties of estimators: Unbiasedness, Efficiency, Consistency, Sufficiency, Robustness. A lower bound for a variance of an estimate, Method of estimation: The method of moment, Least square method, Maximum likelihood estimation and its properties, UMVU Estimator, Interval estimation. Test of Hypothesis: Elements of hypothesis testing, Unbiased test, Neyman-Pearson Theory, MP and UMP tests, Likelihood ratio and related tests, Large sample tests, Test based on χ^2 , t , F .

Text Books:

1. H. J. Larson, "Introduction to Probability Theory and Statistical Inference", John Wiley & Sons, 1982.
2. V. K. Rohatgi, "Introduction to Probability Theory and Mathematical Statistics", John Wiley & Sons, 1976.

References:

1. I. Miller, M. Miller, "John E. Freund's Mathematical Statistics with Applications", Pearson, 2013.

M306: Calculus of Several Variables

Prerequisites: M201, M204

L	P	T	C
3	0	1	4

Differentiability of functions from an open subset of \mathbb{R}^n to \mathbb{R}^m and properties, chain rule, partial and directional derivatives, Continuously differentiable functions, Inverse function theorem, Implicit function theorem, Interchange of order of differentiation, Taylor's series, Extrema of a function, Extremum problems with constraints, Lagrange multiplier method with applications, Integration of functions of several variables, Change of variable

formula (without proof) with examples of applications of the formula, spherical coordinates, Stokes theorem (without proof), Deriving Green's theorem, Gauss theorem and Classical Stokes theorem.

Text Books:

1. W. Fleming, "Functions of Several Variables", Undergraduate Texts in Mathematics. Springer-Verlag, 1977.
2. T. M. Apostol, "Calculus Vol. II", Wiley-India edition, 2009.

References:

1. W. Kaplan, "Advanced Calculus", Addison-Wesley Publishing Company, 1984.
2. T. M. Apostol, "Mathematical Analysis", Narosa Publishing House, 2013.

M307: Field Theory

Prerequisites: M205, M302

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Field extensions, algebraic extensions, Ruler and compass constructions, splitting fields, algebraic closures, separable and inseparable extensions, cyclotomic polynomials and extensions, automorphism groups and fixed fields, Galois extensions, Fundamental theorem of Galois theory, Fundamental theorem of algebra, Finite fields, Galois group of polynomials, Computations of Galois groups over rationals, Solvable groups, nilpotent groups, Solvability by radicals, Transcendental extensions.

Text Book:

1. D. S. Dummit, R. M. Foote, "Abstract Algebra", Wiley-India edition, 2013.

References:

1. I. N. Herstein, "Topics in Algebra", Wiley-India edition, 2013.
2. M. Artin, "Algebra", Prentice-Hall of India, 2007.
3. J. Rotman, "Galois Theory", Universitext, Springer-Verlag, 1998.

M308: Complex Analysis

Prerequisites: M306

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Algebraic and geometric representation of complex numbers; elementary functions including the exponential functions and its relatives (log, cos, sin, cosh, sinh, etc.); concept of holomorphic (analytic) functions, complex derivative and the Cauchy-Riemann equations; harmonic functions. Conformal Mapping, Linear Fractional Transformations, Complex line integrals and Cauchy Integral formula, Representation of holomorphic functions in terms of power series, Morera's theorem, Cauchy estimates and Liouville's theorem, zeros of holomorphic functions, Uniform limits of holomorphic functions. Behaviour of holomorphic function near an isolated singularity, Laurent expansions, Counting zeros and poles, Argument principle, Rouché's theorem, Calculus of residues and evaluation of integrals using contour integration. The Open Mapping theorem, Maximum Modulus Principle, Schwarz Lemma.

Text Books:

1. J. B. Conway, "Functions of One Complex Variable", Narosa Publishing House, 2002.
2. R. E. Greene, S. G. Krantz, "Function Theory of One Complex Variable", American Mathematical Society, 2011.

References:

M310: Geometry of Curves and Surfaces

L P T | C

Prerequisites: M306

3	0	1	4
---	---	---	---

Curves in two and three dimensions, Curvature and torsion for space curves, Existence theorem for space curves, Serret-Frenet formula for space curves, Jacobian theorem, Surfaces in \mathbb{R}^3 as 2-dimensional manifolds, Tangent spaces and derivatives of maps between manifolds, Geodesics, First fundamental form, Orientation of a surface, Second fundamental form and the Gauss map, Mean curvature, Gaussian Curvature, Differential forms, Integration on surfaces, Stokes formula, Gauss-Bonnet theorem.

Text Books:

1. M. P. Do Carmo, “Differential Geometry of Curves and Surfaces”, Prentice Hall, 1976.
2. Andrew Pressley, “Elementary Differential Geometry”, Springer, 2010.

References:

1. M. P. Do Carmo, “Differential Forms and Applications”, Springer, 1994.
2. J. A. Thorpe, “Elementary Topics in Differential Geometry”, Undergraduate texts in mathematics, Springer, 2011.

M311: Numerical Analysis

L P T | C

Prerequisites: M201, M303

2	1	1	4
---	---	---	---

Errors in computation: Representation and arithmetic of numbers, source of errors, error propagation, error estimation. Numerical solution of non-linear equations: Bisection method, Secant method, Newton-Raphson method, Fixed point methods, Muller’s method. Interpolations: Lagrange interpolation, Newton divided differences, Hermite interpolation, Piecewise polynomial interpolation. Approximation of functions: Weierstrass and Taylor expansion, Least square approximation. Numerical Integration: Trapezoidal rule, Simpson’s rule, Newton-Cotes rule, Guassian quadrature. Numerical solution of ODE: Euler’s method, multi-step methods, Runge-Kutta methods, Predictor-Corrector methods. Solutions of systems of linear equations: Gauss elimination, pivoting, matrix factorization, Iterative methods – Jacobi and Gauss-Siedel methods. Matrix eigenvalue problems: power method.

Text Book:

M401: Functional Analysis

L P T | C

Prerequisites: M204, M205

3	0	1	4
---	---	---	---

Normed linear spaces and continuous linear transformations, Hahn-Banach theorem (analytic and geometric versions), Baire’s theorem and its consequences – three basic principles of functional analysis (open mapping theorem, closed graph theorem and uniform boundedness principle), Computing the dual of wellknown Banach spaces, Hilbert spaces, Riesz representation theorem, Adjoint operator, Compact operators, Spectral theorem for self adjoint compact operators.

Text Books:

1. J. B. Conway, “A Course in Functional Analysis”, Graduates Texts in Mathematics 96, Springer, 2006.
2. B. Bollobás, “Linear Analysis”, Cambridge University Press, 1999.

References:

1. G. F. Simmons, “Introduction to Topology and Modern Analysis”, Tata McGraw-Hill, 2013.

M402: Representations of Finite Groups

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M202, M205, M302

Group representations, Maschke’s theorem and completely reducibility, Characters, Inner product of Characters, Orthogonality relations, Burnside’s theorem, induced characters, Frobenius reciprocity, induced representations, Mackey’s Irreducibility Criterion, Character table of some well-known groups, Representation theory of the symmetric group: partitions and tableaux, constructing the irreducible representations.

Text Book:

1. G. James, M. Liebeck, “Representations and Characters of Groups”, Cambridge University Press, 2010.

References:

M403: Commutative Algebra

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M302

Commutative rings, ideals, operations on ideals, prime and maximal ideals, nilradicals, Jacobson radicals, extension and contraction of ideals, Modules, free modules, projective modules, exact sequences, tensor product of modules, Restriction and extension of scalars, localization and local rings, extended and contracted ideals in rings of fractions, Noetherian modules, Artinian modules, Primary decompositions and associate primes, Integral extensions, Valuation rings, Discrete valuation rings, Dedekind domains, Fractional ideals, Completion, Dimension theory.

Text Book:

1. M. F. Atiyah, I. G. Macdonald, “Introduction to Commutative Algebra”, Addison-Wesley Publishing Co., 1969.

References:

M404: Algebraic Topology

L	P	T	C
3	0	1	4

Prerequisites: M302, M304

Homotopy Theory: Simply Connected Spaces, Covering Spaces, Universal Covering Spaces, Deck Transformations, Path lifting lemma, Homotopy lifting lemma, Group Actions, Properly discontinuous action, free groups, free product with amalgamation, Seifert-Van Kampen Theorem, Borsuk-Ulam Theorem for sphere, Jordan Separation Theorem. Homology Theory: Simplexes, Simplicial Complexes, Triangulation of spaces, Simplicial Chain Complexes, Simplicial Homology, Singular Chain Complexes, Cycles and Boundary, Singular Homology, Relative Homology, Short Exact Sequences, Long Exact Sequences, Mayer-Vietoris sequence, Excision Theorem, Invariance of Domain.

Text Books:

1. J. R. Munkres, "Topology", Prentice-Hall of India, 2013.
2. A. Hatcher, "Algebraic Topology", Cambridge University Press, 2009.

References:

Syllabus of Elective Courses

M451: Advanced Complex Analysis

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
----------	----------	----------	----------

Prerequisites: M308

3	0	1	4
---	---	---	---

Review of basic Complex Analysis: Cauchy-Riemann equations, Cauchy's theorem and estimates, power series expansions, maximum modulus principle, Classification of singularities and calculus of residues. Space of continuous functions, Arzela's theorem, Spaces of analytic functions, Spaces of meromorphic functions, Riemann mapping theorem, Weierstrass Factorization theorem, Runge's theorem, Simple connectedness, Mittag-Leffler's theorem, Analytic continuation, Schwarz reflection principle, Mondromy theorem, Jensen's formula, Genus and order of an entire function, Hadamard factorization theorem, Little Picard theorem, Great Picard theorem, Harmonic functions.

References:

1. L. V. Ahlfors, "Complex Analysis", Tata McGraw-Hill, 2013.
2. J. B. Conway, "Functions of One Complex Variable II", Graduate Texts in Mathematics 159, Springer-Verlag, 1996.
3. W. Rudin, "Real and Complex Analysis", Tata McGraw-Hill, 2013.
4. R. Remmert, "Theory of Complex Functions", Graduate Texts in Mathematics 122, Springer, 2008.

M452: Advanced Functional Analysis

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
----------	----------	----------	----------

Prerequisites: M401

3	0	1	4
---	---	---	---

Definition and examples of topological vector spaces (TVS) and locally convex spaces (LCS); Linear operators; Hahn-Banach Theorems for TVS/ LCS (analytic and geometric forms); Uniform boundedness principle; Open mapping theorem; Closed graph theorem; Weak and weak* vector topologies; Bipolar theorem; dual of LCS spaces; Krein-Milman theorem for TVS; Krein-Smulyan theorem for Banach spaces; Inductive and projective limit of LCS.

References:

3. J. B. Conway, "A Course in Functional Analysis", Graduate Texts in Mathematics 96, Springer, 2006.

M453: Advanced Linear Algebra

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
----------	----------	----------	----------

Prerequisites: M205

3	0	1	4
---	---	---	---

Rational and Jordan canonical forms, Inner product spaces, Unitary and Normal operators, Forms on inner product spaces, Spectral theorems, Bilinear forms, Matrix decomposition theorems, Courant- Fischer minimax and related theorems, Nonnegative matrices, Perron-Frobenius theory, Generalized inverse, Matrix Norm, Perturbation of eigenvalues.

References:

M454: Partial Differential Equations

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M301, M303, M306

Classification of Partial Differential Equations, Cauchy Problem, Cauchy-Kowalevski Theorem, Lagrange-Green identity, The uniqueness theorem of Holmgren, Transport equation: Initial value problem, nonhomogeneous problem. Laplace equation: Fundamental solution, Mean Value formula, properties of Harmonic functions, Green's function, Energy methods, Harnack's inequality. Heat Equation: Fundamental solution, Mean value formula, properties of solutions. Wave equation: Solution by spherical means, Non-homogeneous problem, properties of solutions.

References:

4. S. Kesavan, "Topics in Functional Analysis and Applications", John Wiley & Sons, 1989.

M455: Introduction to Stochastic Processes

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M206

Discrete Markov chains with countable state space; Classification of states: recurrences, transience, periodicity. Stationary distributions, reversible chains, Several illustrations including the Gambler's Ruin problem, queuing chains, birth and death chains etc. Poisson process, continuous time Markov chain with countable state space, continuous time birth and death chains.

4. S. M. Ross, "Stochastic Processes", Wiley Series in Probability and Statistics: Probability and Statistics, John Wiley & Sons, 1996

M456: Algebraic Geometry

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M205, M302

Prime ideals and primary decompositions, Ideals in polynomial rings, Hilbert Basis theorem, Noether normalisation lemma, Hilbert's Nullstellensatz, Affine and Projective varieties, Zariski Topology, Rational functions and morphisms, Elementary dimension theory, Smoothness, Curves, Divisors on curves, Bezout's theorem, Riemann-Roch for curves, Line bundles on Projective spaces.

References:

M457: Algebraic Graph Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M205, M208

Adjacency matrix of a graph and its eigenvalues, Spectral radius of graphs, Regular graphs and Line graphs, Strongly regular graphs, Cycles and Cuts, Laplacian matrix of a graph, Algebraic connectivity, Laplacian spectral radius of graphs, Distance matrix of a graph, General properties of graph automorphisms, Transitive and Arc-transitive graphs, Symmetric graphs.

References:

M458: Algebraic Number Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M207, M307, M403

Number Fields and Number rings, prime decomposition in number rings, Dedekind domains, Ideal class group, Galois theory applied to prime decomposition, Gauss reciprocity law, Cyclotomic fields and their ring of integers, finiteness of ideal class group, Dirichlet unit theorem, valuations and completions of number fields, Dedekind zeta function and distribution of ideal in a number ring.

References:

6. J. Neukirch, “Algebraic Number Theory”, Springer-Verlag, 1999.

M460: Algorithm

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M208

Algorithm analysis: asymptotic notation, probabilistic analysis; Data Structure: stack, queues, linked list, hash table, binary search tree, red-black tree; Sorting: heap sort, quick sort, sorting in linear time; Algorithm design: divide and conquer, greedy algorithms, dynamic programming; Algebraic algorithms: Winograd’s and Strassen’s matrix multiplication algorithm, evaluation of polynomials, DFT, FFT, efficient FFT implementation;

Graph algorithms: breadth-first and depth-first search, minimum spanning trees, single-source shortest paths, all-pair shortest paths, maximum flow; NP-completeness and approximation algorithms.

4. D. E. Knuth, "The Art of Computer Programming Vol. 1, Vol. 2, Vol 3", Addison-Wesley Publishing Co., 1997, 1998, 1998.

M462: Cryptology

Prerequisites: M202, M207

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Overview: Cryptography and cryptanalysis, some simple cryptosystems (e.g., shift, substitution, affine, knapsack) and their cryptanalysis, classification of cryptosystems, classification of attacks; Information Theoretic Ideas: Perfect secrecy, entropy; Secret key cryptosystem: stream cipher, LFSR based stream ciphers, cryptanalysis of stream cipher (e.g., correlation attack, algebraic attacks), block cipher, DES, linear and differential cryptanalysis, AES; Public-key cryptosystem: Implementation and cryptanalysis of RSA, ElGamal public-key cryptosystem, Discrete logarithm problem, elliptic curve cryptography; Data integrity and authentication: Hash functions, message authentication code, digital signature scheme, ElGamal signature scheme; Secret sharing: Shamir's threshold scheme, general access structure and secret sharing.

2. A. J. Menezes, P. C. van Oorschot, S. A. Vanstone, "Handbook of Applied Cryptography", CRC Press, 1997.

M463: Finite Fields

Prerequisites: M307

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Structure of finite fields: characterization, roots of irreducible polynomials, traces, norms and bases, roots of unity, cyclotomic polynomial, representation of elements of finite fields, Wedderburn's theorem; Polynomials over finite field: order of polynomials, primitive polynomials, construction of irreducible polynomials, binomials and trinomials, factorization of polynomials over small and large finite fields, calculation of roots of polynomials; Linear recurring sequences: LFSR, characteristic polynomial, minimal polynomial, characterization of linear recurring sequences, Berlekamp-Massey algorithm; Applications of finite fields: Applications in cryptography, coding theory, finite geometry, combinatorics.

M464: Information and Coding Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M205, M307

Information Theory: Entropy, Huffman coding, Shannon-Fano coding, entropy of Markov process, channel and mutual information, channel capacity; Error correcting codes: Maximum likelihood decoding, nearest neighbour decoding, linear codes, generator matrix and parity-check matrix, Hamming bound, Gilbert-Varshamov bound, binary Hamming codes, Plotkin bound, nonlinear codes, Reed-Muller codes, Cyclic codes, BCH codes, Reed-Solomon codes, Algebraic codes.

References:

M465: Mathematical Logic

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M101

Propositional Logic, Tautologies and Theorems of propositional Logic, Tautology Theorem. First Order Logic: First order languages and their structures, Proofs in a first order theory, Model of a first order theory, validity theorems, Metatheorems of a first order theory, e. g., theorems on constants, equivalence theorem, deduction and variant theorems etc. Completeness theorem, Compactness theorem, Extensions by definition of first order theories, Interpretations theorem, Recursive functions, Arithmatization of first order theories, Godels first Incompleteness theorem, Rudiments of model theory including Lowenheim-Skolem theorem and categoricity.

References:

1. J. R. Shoenfield, “Mathematical logic”, Addison-Wesley Publishing Co., 1967.
2. E. Mendelson, “Introduction to Mathematical Logic”, Chapman & Hall, 1997.

M466: Measure Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M301

σ -algebras of sets, measurable sets and measures, extension of measures, construction of Lebesgue measure, integration, convergence theorems, Radon-Nikodym theorem, product measures, Fubini’s theorem, differentiation of integrals, absolutely continuous functions, L_p -spaces, Riesz representation theorem for the space $C[0, 1]$.

References:

M467: Nonlinear Analysis

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M306, M401

Calculus in Banach spaces, inverse and multiplicit function theorems, fixed point theorems of Brouwer, Schauder and Tychonoff, fixed point theorems for nonexpansive and set-valued maps, predegree results, compact vector fields, homotopy, homotopy extension, invariance theorems and applications.

References:

1. S. Kesavan, "Nonlinear Functional Analysis", Texts and Readings in Mathematics 28, Hindustan Book Agency, 2004.

M468: Operator Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M401

Compact operators on Hilbert Spaces. (a) Fredholm Theory (b) Index, C*-algebras - noncommutative states and representations, Gelfand-Neumark representation theorem, Von-Neumann Algebras; Projections, Double Com-mutant theorem, L^∞ functionalCalculus, Toeplitz operators.

M469: Theory of Computation

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M101

Automata and Language Theory: Finite automata, regular expression, pump-ing lemma, context free grammar, context free languages, Chomsky normal form, push down automata, pumping lemma for CFL; Computability: Tur-ning machines, Churh-Turing thesis, decidability, halting problem, reducibil-ity, recursion theorem; Complexity: Time complexity of Turing machines, Classes P and NP, NP completeness, other time classes, the time hierarchy.

References:

3. M. Sipser, "Introduction to the Theory of Computation", PWS Publishing, 1997.

M470: Abstract Harmonic Analysis

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M301, M308, M401

Topological Groups: Basic properties of topological groups, subgroups, quotient groups. Examples of various matrix groups. Connected groups. Haar measure: Discussion of Haar measure without proof on \mathbb{R} , \mathbb{T} , \mathbb{Z} and simple matrix groups, Convolution, the Banach algebra $L^1(G)$ and convolution with special emphasis on $L^1(\mathbb{R})$, $L^1(\mathbb{T})$ and $L^1(\mathbb{Z})$. Basic Representation Theory: Unitary representation of groups, Examples and General properties, The representations of Group and Group algebras, C^* -algebra of a group, GNS construction, Positive definite functions, Schur's Lemma. Abelian Groups: Fourier transform and its properties, Approximate identities in $L^1(G)$, Classical Kernels on \mathbb{R} , The Fourier inversion Theorem, Plancherel theorem on \mathbb{R} , Plancherel measure on \mathbb{R} , \mathbb{T} , \mathbb{Z} . Dual Group of an Abelian Group: The Dual group of a locally compact abelian group, Computation of dual groups for \mathbb{R} , \mathbb{T} , \mathbb{Z} , Pontryagin's Duality theorem.

M471: Advanced Number Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M207, M307, M308

Review of Finite fields, Gauss Sums and Jacobi Sums, Cubic and biquadratic reciprocity, Polynomial equations over finite fields, Theorems of Chevally and Warning, Quadratic forms over prime fields. Ring of p -adic integers, Field of p -adic numbers, completion, p -adic equations, Hensel's lemma, Hilbert symbol, Quadratic forms with p -adic coefficients. Dirichlet series: Abscissa of convergence and absolute convergence, Riemann Zeta function and Dirichlet L -functions. Dirichlet's theorem on primes in arithmetic progression. Functional equation and Euler product for L -functions. Modular Forms and the Modular Group, Eisenstein series, Zeros and poles of modular functions, Dimensions of the spaces of modular forms, The j -invariant L -function associated to modular forms, Ramanujan τ function.

M472: Advanced Probability

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M206, M301

Probability spaces, Random Variables, Independence, Zero-One Laws, Expectation, Product spaces and Fubini's theorem, Convergence concepts, Law

of large numbers, Kolmogorov three-series theorem, Levy-Cramer Continuity theorem, CLT for i.i.d. components, Infinite Products of probability measures, Kolmogorov's Consistency theorem, Conditional expectation, Discrete parameter martingales with applications.

References:

M473: Algebraic Combinatorics

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M202, M203

Catalan Matrices and Orthogonal Polynomials, Catalan Numbers and Lattice Paths, Combinatorial Interpretation of Catalan Numbers, Symmetric Polynomials and Functions, Schur Functions, Jacobi-Trudi identity, RSK Algorithm, Standard Tableaux, Young diagrams and q -binomial coefficients, Plane Partitions, Group actions on boolean algebras, Enumeration under group action, Walks in graphs, Cubes and the Radon transform, Sperner property, Matrix-Tree Theorem.

References:

M474: Foundations of Cryptography

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M102, M206

Introduction to cryptography and computational model, computational difficulty, pseudorandom generators, zero-knowledge proofs, encryption schemes, digital signature and message authentication schemes, cryptographic protocol.

References:

M475: Incidence Geometry

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M205

Definitions and Examples, projective planes, affine planes, projective spaces, affine spaces, collineations of projective and affine spaces, fundamental theorem of projective and affine spaces, polar spaces, generalized quadrangles, quadrics and quadratic sets.

References:

1. J. Ueberberg, "Foundations of Incidence Geometry", Springer Monographs in Mathematics, Springer, 2011.

M476: Lie Algebras

Prerequisites: M202, M205, M307

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Definitions and Examples, Derivations, Ideals, Homomorphisms, Nilpotent Lie Algebras and Engel's theorem, Solvable Lie Algebras and Lie's theorem, Jordan decomposition and Cartan's criterion, Semisimple Lie algebras, Casimir operator and Weyl's theorem, Representations of $sl(2, F)$, Root space decomposition, Abstract root systems, Weyl group and Weyl chambers, Classification of irreducible root systems, Abstract theory of weights, Isomorphism and conjugacy theorems, Universal enveloping algebras and PBW theorem, Representation theory of semi-simple Lie algebras, Verma modules and Weyl character formula.

M477: Optimization Theory

Prerequisites: M102, M205

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Linear programming problem and its formulation, convex sets and their properties, Graphical method, Simplex method, Duality in linear programming, Revised simplex method, Integer programming, Transportation problems, Assignment problems, Games and strategies, Two-person (non) zero-sum games, Introduction to non-linear programming and techniques.

References:

M478: Advanced Partial Differential Equations

Prerequisites: M401, M454

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Distribution Theory, Sobolev Spaces, Embedding theorems, Trace theorem. Dirichlet, Neumann and Oblique derivative problem, Weak formulation, Lax-Milgram, Maximum Principles- Weak and Strong Maximum Principles, Hopf Maximum Principle, Alexandroff-Bakelmann-Pucci Estimate.

References:

1. L. C. Evans, “Partial Differential Equations”, Graduate Studies in Mathematics 19, American Mathematical Society, 2010.

M479: Random Graphs

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M206, M208

Models of random graphs and of random graph processes; illustrative examples; random regular graphs, configuration model; appearance of the giant component small subgraphs; long paths and Hamiltonicity; coloring problems; eigenvalues of random graphs and their algorithmic applications; pseudo-random graphs.

References:

1. N. Alon, J. H. Spencer, “The Probabilistic Method”, John Wiley & Sons, 2008

M480: Randomized Algorithms and Probabilistic Methods

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M206

Inequalities of Markov and Chebyshev (median algorithm), first and second moment method (balanced allocation), inequalities of Chernoff (permutation routing) and Azuma (chromatic number), rapidly mixing Markov chains (random walk in hypercubes, card shuffling), probabilistic generating functions (random walk in d -dimensional lattice)

References:

2. M. Mitzenmacher, E. Upfal, “Probability and Computing: Randomized algorithms and probabilistic analysis”, Cambridge University Press, 2005.

M551: Algebraic Computation

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M205, M307

Linear algebra and lattices: Asymptotically fast matrix multiplication algorithms, linear algebra algorithms, normal forms over fields, Lattice reduction; Solving system of non-linear equations: Gröbner basis, Buchberger’s algorithms, Complexity of Gröbner basis computation; Algorithms on polynomials: GCD, Barlekamp-Massey algorithm, factorization of polynomials over finite field, factorization of polynomials over \mathbb{Z} and \mathbb{Q} ; Algorithms for algebraic number theory: Representation and operations on algebraic numbers, trace, norm, characteristic polynomial, discriminant, integral bases, polynomial reduction, computing maximal order, algorithms for quadratic fields; Elliptic curves: Implementation of elliptic curve, algorithms for elliptic curves.

M552: Analytic Number Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M201, M207, M308

Arithmetic functions, Averages of arithmetical functions, Distribution of primes, finite abelian groups and characters, Gauss sums, Dirichlet series and Euler products, Reimann Zeta function, Dirichlet *L*-functions, Analytic proof of the prime number theorem, Dirichlet Theorem on primes in arithmetic progression.

References:

1. T. M. Apostol, "Introduction to Analytic Number Theory", Springer International Student Edition, 2000.

M553: Classical Groups

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M202, M205, M307

General and special linear groups, bilinear forms, Symplectic groups, symmetric forms, quadratic forms, Orthogonal geometry, orthogonal groups, Clifford algebras, Hermitian forms, Unitary spaces, Unitary groups.

References:

1. L. C. Grove, "Classical Groups and Geometric Algebra", Graduate Studies in Mathematics 39, American Mathematical Society, 2002.
2. E. Artin, "Geometric Algebra", John Wiley & sons, 1988.

M554: Ergodic Theory

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites:

Measure preserving systems; examples: Hamiltonian dynamics and Liouville's theorem, Bernoulli shifts, Markov shifts, Rotations of the circle, Rotations of the torus, Automorphisms of the Torus, Gauss transformations, Skew-product, Poincare Recurrence lemma: Induced transformation: Kakutani towers: Rokhlins lemma. Recurrence in Topological Dynamics, Birkhoffs Recurrence theorem, Ergodicity, Weak-mixing and strong-mixing and their characterizations, Ergodic Theorems of Birkhoff and Von Neumann. Consequences of the Ergodic theorem. Invariant measures on compact systems, Unique ergodicity and equidistribution. Weyls theorem, The Isomorphism problem; conjugacy, spectral equivalence, Transformations with discrete spectrum, Halmosvon Neumann theorem, Entropy. The Kolmogorov-Sinai theorem. Calculation of Entropy. The Shannon Mc-MillanBreiman Theorem, Flows. Birkhoffs ergodic Theorem and Wieners ergodic theorem for flows. Flows built under a function.

M555: Harmonic Analysis

Prerequisites: M301

L	P	T	C
3	0	1	4

Fourier series and its convergences, Dirichlet kernel, Fejer kernel, Parseval formula and its applications. Fourier transforms, the Schwartz space, Distribution and tempered distribution, Fourier Inversion and Plancherel theorem. Fourier analysis on L_p -spaces. Maximal functions and boundedness of Hilbert transform. Paley-Wiener Theorem for distribution. Poisson summation formula, Heisenberg uncertainty Principle, Wiener's Tauberian theorem.

References:

M556: Lie Groups and Lie Algebras - I

Prerequisites: M205, M304, M306

L	P	T	C
3	0	1	4

General Properties: Definition of Lie groups, subgroups, cosets, group actions on manifolds, homogeneous spaces, classical groups. Exponential and logarithmic maps, Adjoint representation, Lie bracket, Lie algebras, subalgebras, ideals, stabilizers, center Baker-Campbell-Hausdorff formula, Lie's Theorems. Structure Theory of Lie Algebras: Solvable and nilpotent Lie algebras (with Lie/Engel theorems), semisimple and reductive algebras, invariant bilinear forms, Killing form, Cartan criteria, Jordan decomposition. Complex semisimple Lie algebras, Toral subalgebras, Cartan subalgebras, Root decomposition and root systems. Weight decomposition, characters, highest weight representations, Verma modules, Classification of irreducible finite-dimensional representations, BGG resolution, Weyl character formula.

References:

7. V. S. Varadharajan, "Lie Groups, Lie Algebras and their Representations", Springer-Verlag, 1984.

M557: Operator Algebras

Prerequisites: M401

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Banach algebras/ C^* -algebras: Definition and examples; Spectrum of a Banach algebra; Gelfand transform; Gelfand-Naimark theorem for commutative Banach algebras/ C^* -algebras; Functional calculus for C^* -algebras; Positive cone in a C^* -algebra; Existence of an approximate identity in a C^* -algebra; Ideals and Quotients of a C^* -algebra; Positive linear functionals on a C^* -algebra; GNS construction. Locally convex topologies on the algebras of bounded operators on a Hilbert space, von-Neumann's bi-commutant theorem; Kaplansky's density theorem. Ruan's characterization of Operator Spaces (if time permits).

M558: Representations of Linear Lie Groups

Prerequisites: M205, M304, M306

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Introduction to topological group, Haar measure on locally compact group, Representation theory of compact groups, Peter Weyl theorem, Linear Lie groups, Exponential map, Lie algebra, Invariant Differential operators, Representation of the group and its Lie algebra. Fourier analysis on $SU(2)$ and $SU(3)$. Representation theory of Heisenberg group . Representation of Euclidean motion group.

References:

1. J. E. Humphreys, "Introduction to Lie algebras and representation theory", Springer-Verlag, 1978.

M559: Harmonic Analysis on Compact Groups

Prerequisites: M205, M304, M401

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Review of General Theory: Locally compact groups, Computation of Haar measure on \mathbb{R} , \mathbb{T} , $SU(2)$, $SO(3)$ and some simple matrix groups, Convolution, the Banach algebra $L^1(G)$. Representation Theory: General properties of representations of a locally compact group, Complete reducibility, Basic operations on representations, Irreducible representations. Representations

of Compact groups: Unitarity of representations, Matrix coefficients, Schur's orthogonality relations, Finite dimensionality of irreducible representations of compact groups. Various forms of Peter-Weyl theorem, Fourier analysis on Compact groups, Character of a representation. Schur's orthogonality relations among characters. Weyl's Character formula, Computing the Unitary dual of $SU(2)$, $SO(3)$; Fourier analysis on $SO(n)$.

M560: Modular Forms of One Variable

L	P	T	C
3	0	1	4

Prerequisites: M202, M205, M207, M308

$SL_2(\mathbb{Z})$ and its congruence subgroups, Modular forms for $SL_2(\mathbb{Z})$, Modular forms for congruence subgroups, Modular forms and differential operators, Hecke theory, L-series, Theta functions and transformation formula.

References:

1. J.-P. Serre, "A Course in Arithmetic", Graduate Texts in Mathematics 7, Springer-Verlag, 1973.

M561: Elliptic Curves

L	P	T	C
3	0	1	4

Prerequisites: M202, M207, M308

Congruent numbers, Elliptic curves, Elliptic curves in Weierstrass form, Addition law, Mordell-Weil Theorem, Points of finite order, Points over finite fields, Hasse-Weil L -function and its functional equation, Complex multiplication.

References:

1. J. H. Silverman, J. Tate, "Rational Points on Elliptic Curves", Undergraduate Texts in Mathematics, Springer-Verlag, 1992.

M562: Brownian Motion and Stochastic Calculus

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M472

Brownian Motion, Martingale, Stochastic integrals, extension of stochastic integrals, stochastic integrals for martingales, Itô's formula, Application of Itô's formula, stochastic differential equations.

References:

1. H. H. Kuo, "Introduction to Stochastic Integration", Springer, 2006.

M563: Differentiable Manifolds and Lie Groups

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M304, M306

Review of Several variable Calculus: Directional Derivatives, Inverse Function Theorem, Implicit function Theorem, Level sets in \mathbb{R}^n , Taylor's theorem, Smooth function with compact support. Manifolds: Differentiable manifold, Partition of Unity, Tangent vectors, Derivative, Lie groups, Immersions and submersions, Submanifolds. Vector Fields: Left invariant vector fields of Lie groups, Lie algebra of a Lie group, Computing the Lie algebra of various classical Lie groups. Flows: Flows of a vector field, Taylor's formula, Complete vector fields. Exponential Map: Exponential map of a Lie group, One parameter subgroups, Frobenius theorem (without proof). Lie Groups and Lie Algebras: Properties of Exponential function, product formula, Cartan's Theorem, Adjoint representation, Uniqueness of differential structure on Lie groups. Homogeneous Spaces: Various examples and Properties. Coverings: Covering spaces, Simply connected Lie groups, Universal covering group of a connected Lie group. Finite dimensional representations of Lie groups and Lie algebras.

M564: Lie Groups and Lie Algebras - II

<i>L</i>	<i>P</i>	<i>T</i>	<i>C</i>
3	0	1	4

Prerequisites: M556

General theory of representations, operations on representations, irreducible representations, Schur's lemma, Unitary representations and complete reducibility. Compact Lie groups, Haar measure on compact Lie groups, Schur's Theorem, characters, Peter-Weyl theorem, universal enveloping algebra, Poincare-Birkoff-Witt theorem, Representations of $\text{Lie}(SL(2, \mathbb{C}))$. Abstract root systems, Weyl group, rank 2 root systems, Positive roots, simple roots, weight lattice, root lattice, Weyl chambers, simple reflections, Dynkin diagrams, classification of root systems, Classification of semisimple Lie algebras. Representations of Semisimple Lie algebras, weight decomposition, characters, highest weight representations, Verma modules, Classification of

irreducible finite-dimensional representations, Weyl Character formula, The representation theory of $SU(3)$, Frobenius Reciprocity theorem, Spherical Harmonics.

M565: Mathematical Foundations for Finance

L P T | C

Prerequisites: $M472$

3	0	1	4
---	---	---	---

Financial market models in finite discrete time, Absence of arbitrage and martingale measures, Valuation and hedging in complete markets, Basic facts about Brownian motion, Stochastic integration, Stochastic calculus: Itô’s formula, Girsanov transformation, Itô’s representation theorem, Black-Scholes formula

References:
